HICKMAN DESIGN

A4 print drying rack

Assembly & stacking instructions

YOU'LL NEED

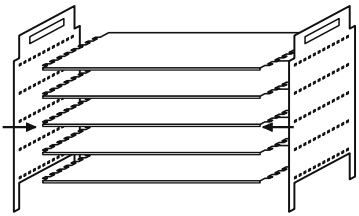

Small rubber or wooden mallet

Wood glue
Required for stacking lips.
Optional for shelf joints.

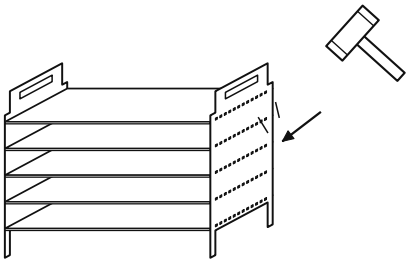

Work on a flat, level surface.

1 Align the shelves

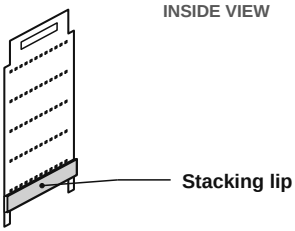

Line up the shelf tabs with the matching slots in the side panels. Fit all five shelves carefully.

2 Seat the joints

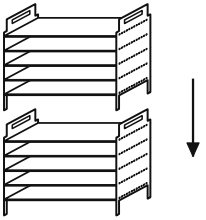

If using glue, add a small dab to the joints. Tap gently and evenly. Do not force the panels.

3 Fit the stacking lips

Fit each lip along the inside lower edge, from front leg to back leg. Secure the lips with wood glue.

4 Check, then stack

Check joints are seated and the rack is level. Let the glue cure fully before stacking matching racks.

TO USE Lay one print up to A4 flat on each shelf.

Diagrams simplified; not to scale.
